DRY STACK LEDGESTONE Specs

Dry Stack comes as loose format material in rough cut shapes and sizes, which has been sawn-cut on the back for ease of installation. Masons chip and fit this material on site, giving life to your walls. The dry stacked look is highly coveted among natural stone purists as it's seen by many as the most technically advanced and beautiful look for a loose stone wall.

*Quantity/crate and stock quantities will vary by color, inquire with a Surface Shop Pro for more details.

INSTALLATION TECHNIQUES

KALAHARI LEDGE

100% Dry Stack

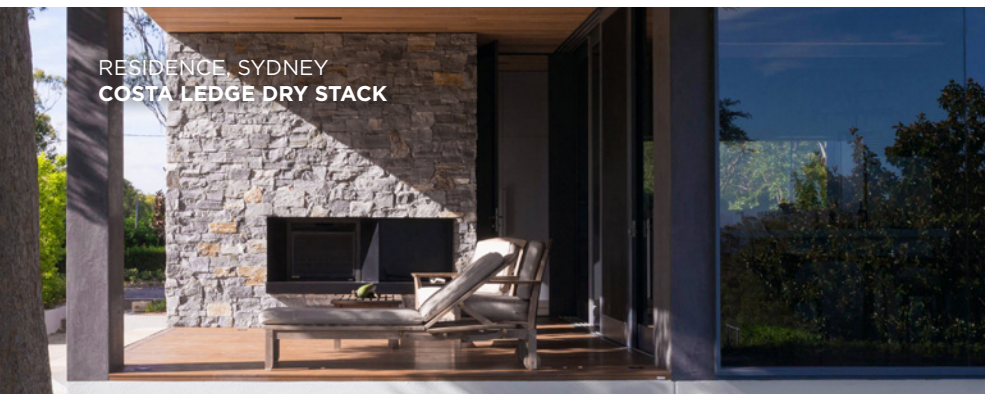

Using all Dry Stack material is the most common way to work with this series, and will provide your installation with an organic and structured linear appearance on the wall. Mockups are recommended.

KALAHARI MIX

50/50 Dry Stack & Terra Form™ Mix

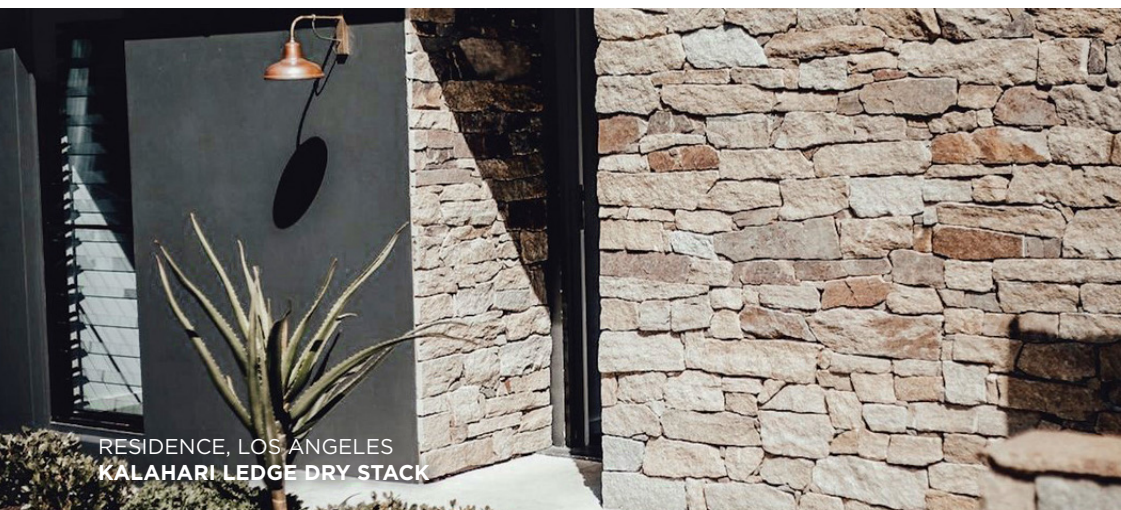

Another method is to mix in our Terra Form™ material to create a customizable blend with larger vertical pieces to break up the linear structure inherent to dry stack.
